

ADEPT

ADEPT is a framework for conflict resolution. The stages are outlined in the left-hand column of the table below.

As you observe the performance of 'Choices' for the second time, record examples of the stages of ADEPT in the right-hand column. Lines in the script are numbered to make referencing easier. However, it's a good idea to write out at least one relevant phrase for each of the stages.

Stage of conflict resolution	Examples of this stage from 'Choices'
<p>ALWAYS start with each party explaining what happened to cause the conflict</p>	
<p>DEFINE the problem</p>	
<p>EXPLORE possible solutions to the problem</p>	
<p>PROPOSE a plan to implement one of these solutions</p>	
<p>TEST the plan by implementing it</p>
